

Monthly Order Plan

Press Farm, Yountville. What the kitchens are expected to order each month, so planting can stay ahead of it. Built from the complete order and delivery history in Press Farm OS, July 2024 through July 2026. Generated July 30, 2026.

How to use this

Find the month. The table lists every field crop the kitchens have taken in that month and how much they took every week. Where a crop was delivered in the same month in more than one year, the years are averaged. Example: marigolds in August, 7 LG a week, means having about 350 blossoms ready every week that month.

These numbers are what the kitchens actually took, not a guess. They cover every delivery ever logged: 418 to PRESS since July 2024, 32 to Under-Study since March 2026, 4 to the Events team and 1 to Press Bar, 4,275 order lines in all. **Plant more than the number.** The field has to carry picking loss, weather and bad germination, so a third extra on top of these numbers is a safe margin.

Units

- **EA** means each, counted by the piece: a leaf, a blossom, a radish, a carrot.
- **LG** and **SM** are the large and small harvest containers we deliver in. This plan combines them: three SM count as one LG, and every container line is given in LG only.
- **GB** is the big green harvest bin for bulky crops. **QT** is a quart, **LBS** is pounds, **BX** is a box, **CS** is a case.
- Marigold blossom counts: French marigold, about 50 blossoms fill an LG. Gem marigold, about 100 fill an LG. Puff ball, about 9 fill an LG.
- Lettuce is cut leaf by leaf and grows back. About half a head of leaves fills an LG.
- Nothing in this plan drops below one per week. Where the kitchens historically took less than that, the line says at least 1 a week, so there is always some on hand in season.

Kitchen timing

Deliveries go out Thursday, Saturday and Monday. The menu changes eight times a year: January 15, March 26, April 15, May 14, June 25, August 27, October 15 and December 10. The kitchen wants samples about three weeks before each change and full picking volume about one week before. Crops need to be ready ahead of those dates, not on them.

Changes coming, plant for these

- **Borage up.** Chef Phil wants borage in volume for a wine cellar concept. Last year it ran about 1 LG a week in early summer. Plant well past that.
- **Alyssum down.** Chef Phil dislikes alyssum. Do not plant more for PRESS. Under-Study still takes a little.
- **Puff ball marigold is new.** Added to the order list in June 2026, about 9 blossoms fill a large. No order history yet, expect orders to start this season.
- **Ox Heart carrots.** PRESS fall and winter only, about 450 carrots a week. One bulk harvest in November of about 8,500 carrots from Quadrant 4 goes into the walk in and carries into late February. The carrot rows in the monthly tables are what the kitchen drew, the planting target is the 8,500.
- **Corn stays in Quadrant 3.** Peter's standing call. Corn has no order history in the system yet.
- **Egyptian star flower** dies in winter even under frost cloth. Replant each spring.
- **Beans** are picked for flowers, tips and pods 1 to 3 inches. Mix varieties for red, pink, purple and peach flowers.
- **Patty pans** are picked at quarter size or smaller.
